

ALEXEY GALLEGO

Full-Stack Development | Systems & Automation | AI Integration
alexeygallegomartinez@gmail.com • (786) 804-7278 • Miami, FL • Bilingual: English / Spanish

TECHNICAL SKILLS

Languages & Frameworks: JavaScript (Node.js, React, Angular), Python, Java, Spring Boot, Next.js, REST APIs, ASP.NET

AI & Automation: LLM Engineering, Agentic AI, MCP, OpenAI / Claude APIs, Codex / Claude Development

Databases: MSSQL, PostgreSQL, MySQL, MongoDB, Sequelize ORM

Infrastructure & DevOps: Docker, Kubernetes, Linux, CI/CD, GitHub Actions, AWS, VMware

Engineering: FANUC Robot Programming, PLC, SolidWorks, 3D Printing, KiCAD

Methodologies: Agile/SCRUM, MVC Architecture, JWT/OAuth2.0

EXPERIENCE

Systems & Software Engineer | Encore Automation | Auburn Hills, MI *Jul 2021 – Present*

- Led a team of 3 engineers to design and build a full enterprise ERP system (ASP.NET, Angular), driving architecture and full-stack development across modules including operations, inventory, sales, and reporting.
- Architected and deployed an internal operations platform (Node.js, React) used by 110+ employees, replacing manual spreadsheet workflows with automated timesheets, expenses, scheduling, and multi-level approvals.
- Owned production infrastructure end-to-end, maintaining 99%+ uptime via self-hosted Ubuntu servers, Dockerized services, CI/CD pipelines, and secure authentication (JWT, CSRF, RBAC).
- Improved industrial process reliability from ~80% to 99% by developing a Python-based system interfacing with FANUC robots to analyze real-time sensor data, detect faults, and standardize quality validation.
- Rebuilt company web platform using Next.js, improving Core Web Vitals (LCP, CLS) and SEO rankings, driving increased inbound leads and more effective communication of complex technical offerings.
- Mentored and onboarded software engineering interns, guiding them through full-stack development (Node.js, React, Python) and contributing to the delivery of internal tools and features.

Manager / Lead Technician | Ubreakifix | Auburn Hills, MI *Jul 2021 – Present*

- Led daily operations for a team of technicians and customer service staff, improving workflow efficiency and increasing store revenue by 50% through process optimization and performance tracking.
- Ranked top technician across Miami locations as a certified repair specialist (Google, Samsung, Apple), consistently delivering high-quality technical diagnostics and repairs.
- Managed inventory systems and procurement processes, ensuring reliable supply levels and minimizing operational downtime.

Technology Co-Op | GE Appliances | Louisville, Ky *Jan 2020 – May 2020*

- Developed an internal MVC-based platform (Node.js, Express, SQL) to display real-time project progress dashboards across facility monitors, improving visibility and coordination across engineering teams.
- Identified and resolved performance issues in A/C ductless systems, improving efficiency and supporting successful deployment of new product features.
- Designed, built, and tested mechanical components, ensuring system-level performance met functional requirements and exceeded competitor benchmarks.

PROJECTS

AI Receipt Analysis System | Solo Developer 2026 – Present

- Built an AI pipeline (OpenAI Vision API) that analyzes receipt images, extracts structured line-item data, and matches entries to expense records, integrated as a core module of the ERP platform reducing manual review time for administrators.

FANUC Robot Data Pipeline | Solo Developer 2022

- Built a Python GUI application that connected to FANUC industrial robots via serial interface, extracted pressure sensor telemetry, flagged defective components, and stored results in a database, raising process reliability from around 80% to 99%.

EDUCATION

B.S. Mechanical Engineering | Florida International University, Miami, FL | May 2021
